

Best free collage maker app for android

Continue

Change the background image with awesome collections!

Best free collage app android.

Softonic review Making a collage for special occasions, celebrations and commemorations is a great idea that is made really simple with a program like Collage Maker. In fact, Collage Maker makes it seriously easy with the Auto-Collage function - all you have to do is add the selection of photos you want in the collage, choose the effects, and press Generate. Before you know it, you'll have a beautiful collage that you can edit further - if you want - and then export, email, set as wallpaper or print. There's no end to the ways you can personalize your Collage Maker creations - you can change the photos, background colors, add text or a huge variety of fun stamps. You'll be able to preview your collage before you finish and, of course, there is a good help file in case you get stuck. Unfortunately, some of Collage Maker's basic features are a little tacky. Many of the templates are downright ugly, while the interface is old-fashioned. Improvements to Collage Maker's Stamp Mode are supposed to be one of this version's major attractions, but the feature isn't very user-friendly. Even so, Collage Maker is a good starter collage creator - it's easy to use and has loads of effects and templates that will allow you to transform your photos in a flash. Collage Maker is a good, simple way of making homemade collages. Fixed a problem that may have been impacting users outside of the United States. Changes Fixed a problem that may have been impacting users outside of the United States. Simple to use. Good selection of auto-features. Create cool wallpapers. Interface and design is unattractive. The best free collage makers can help you transform your photos into a fun work of art effortlessly and, most importantly, without cost to you. Taking photos of practically everything - from food and fur babies to people doing the next TikTok dance trend - is now a universal thing, yet most of us never look at those thousands of photos again. There are some real gems stored on your smartphone so why leave them there? There are excellent online collage makers and photo collage apps that will get your creative juices flowing while letting those photos have their moment in the sun. And, these tools make the process as simple as dragging and dropping. Though if you do need some practice runs, you can use some free stock photos to familiarize yourself with the process. These tools - both web apps and desktop software - allow you make gorgeous collages in moments, ready to print to canvas, share on social media and use as personalized photo gifts to loved ones. Some, like Fotor, even function as a free photo editor so you can ensure that your photos look their best before you begin. They might not be as powerful as the best video editing software, but they have more than enough tools for what you need. We tested enough photo collage makers to consider ourselves experts, so we thought we'd help you find the best free collage makers for your collage-designing needs. Take a look at our top picks below. The best free collage makers 2022 (Image credit: Shutterstock; Fotojet) (opens in new tab) Free collage maker Fotojet looks very much like Fotor and Canva (below), but is more flexible and fun to use than either, making it our number one choice. To get started, click 'Collage' and choose either a grid or an illustrated design (in our opinion a simple grid-based layout shows off your photos better). Those marked with a crown are available to premium account holders only, but you can resize the image frames in any grid, so this isn't much of a drawback. You can also adjust the spacing and roundness of the boxes, and pick an aspect ratio for your canvas. Click 'Add photos', then drag and drop them into the template. Once you've inserted an image you'll be presented with a list of customizable Instagram-style filters to give your collage a bespoke look, plus advanced options for tweaking exposure, brightness, contrast, saturation, and hue. There's a good selection of backgrounds to choose from too (either plain colors, or tasteful geometric patterns), plus clip art and text. Once you've finished, you can save your creation as a JPG or PNG file (there's no PDF option) at a compression setting and size to suit you. You can also share it via Facebook, Twitter, Pinterest, or Tumblr, or even print it directly from the browser. It's great fun to use and easy to master, making it our top pick for the best free collage maker. (Image credit: Shutterstock; Canva) (opens in new tab) Like all the other browser-based free collage makers here, most of Canva's photo collage templates are free to use, but there are also premium designs available for a fee. These are clearly marked, so there's no need to worry about creating a design, then being unable to export it without parting with a handful of cash. To begin, set a new username and password, or sign in with your Facebook or Google account. Select 'Personal use' and you'll be presented with a menu of project types, including social media graphics, banners, book covers, and presentations. Select 'Photo collage' then 'See all collage templates' to see the full set of free options available. Alternatively, click 'Elements' and choose a grid, then start adding the images, borders, icons, and other items that will make up your collage. To add your own pictures, click 'Uploads' and drag them from your desktop. You can then drag them straight onto your collage canvas. You can also add images from Facebook, or from Canva's own library of free pictures. If you've chosen a grid layout, they will be resized and cropped to fit automatically. Once you're done, you can save your collage as a printable PDF, PNG, or JPG file, or make it public for others to use. You can even add crop marks and bleed space - an option that's very useful for professional printing, and absent from most free collage makers. The only drawback of Canva is that you can't set the resolution of the output file (although you do have a choice of standard or print-quality PDFs). Beyond that, it's a truly superb free collage maker. Read our full Canva review (Image credit: Shutterstock; Fotor) (opens in new tab) There are currently two versions of Fotor's free collage maker - one that uses Flash, and another built with HTML5. The former will soon be phased out in favour of the latter, but they work the same way. Fotor's design isn't quite as intuitive as Canva's, but it's still much quicker and easier than creating a collage from first principles. All of Fotor's essential features are free, with extras available for a subscription fee. Premium membership also removes ads from the collage creator. To get started, click 'Sign in' and either create a new account using your email address, or log in with Facebook (you'll need an account in order to save your work as you move between tools). Once that's done, click 'Collage', pick a template (those marked with a diamond icon are only available to premium account holders) and upload your pictures using the 'Import' button on the right. Click 'Fill in' on the left, and the spaces in your chosen template will be populated with the uploaded pictures - cropped and resized to fit automatically. It's incredibly simple, and the quickest way to create a collage if you don't mind letting the web app make creative decisions for you. Stickers and text let you give your design a personal touch before it's exported. Unlike Canva, Fotor lets you choose the aspect ratio and resolution of your finished collage before saving it in JPG, PNG or PDF format. Fotor is an excellent free collage maker, though its design is a little less intuitive than Canva, pushing it into a respectable third place. Read our full Fotor review (Image credit: Shutterstock; NCH Software) (opens in new tab) PhotoPad is a desktop collage maker, making it faster and more flexible than its browser-based counterparts. You don't have to relinquish your email address or Facebook username to use it, either. Unfortunately, it looks a little dated, and lacks some of the features that make online collage makers so much fun, including stickers and filters. Click 'Collage' to begin, and set up your canvas by choosing a size for the finished print. Next, pick the background that will show behind your images. Most of the patterns provided here are quite cheesy, but you can also use your own picture or a solid color. Once that's done, it's time to choose a layout. There's a great choice of grids (none are locked away behind a paywall), and you can customize the spacing between photos and roundness of the corners using a pair of sliders. Click a space in your grid to add a photo from your PC. They will be resized to fit, and you can adjust the area to be cropped by clicking and dragging. Unfortunately there's no way to add text or shapes within the collage editor, and neither are there any filters to give your pictures a fresh look before finalizing your design. If you really want to add extra elements, you'll have to re-open the saved collage using PhotoPad's main photo editor and make the alterations manually. (Image credit: Shutterstock; Digital Palette LLC) (opens in new tab) Unlike other browser-based free photo collage makers, piZap doesn't ask you to part with your email address before you start creating your first design; just get stuck straight in. This is a handy time-saver, but has the disadvantage that you can't save your progress and edit your creation at a later date. First, pick a free design; there are options based around rectangles (our preferred choice), hearts, circles, and other shapes like stars. The latter options are better suited to greeting cards than wall art, and risk detracting from the impact of your photos. We'd also avoid the themed options, which are all rather cheesy. Once you've picked a template, simply click each frame in turn to insert a photo. Not only can you upload images from your PC, you can also grab pictures from Facebook, Instagram, Dropbox, and Flickr. The now-defunct Google Picasa is also listed. Once your photos are in place, you can set a background color, adjust spacing, and add a drop shadow. There's a good range of filters available, though they can only be applied to the entire canvas, not individual photos, and the clip art options lack subtlety. The remaining tools (paintbrushes and meme text) are fun for creating something silly to share online, but not for stylish wall art. Once you've finished, the free collage maker only gives you one export option - a standard resolution JPG that's fine for a small print, but not for a large canvas. Overall, piZap is best for making fun compositions to share on social media. If you want something to hang on your wall, the other tools here are much better choices. Read our full piZap review. How to choose the best free collage maker for you? When you're picking a collage maker, there are a few important factors to keep in mind. Perhaps the most important is what you're going to be using the finished collage for. Do you want something that you can print to canvas, or would you like to share it on Instagram and Facebook? Some collage makers only allow you to export your creations at fairly low resolutions that are fine for viewing online, but would look blurry and unappealing in print. If you're planning to commit your creation to paper and ink, ideally you want a service that will let you export it as a print-quality PDF or JPG. Templates are another consideration. Some collage makers essentially give you a grid and leave you to it, which could be perfect if you already have a clear idea of what you'd like to create, but if you're not too confident creating a design yourself then you might be better served by a tool that includes a set of smart pre-made templates. Finally, bear in mind that many collage makers are free to use, but also have a premium subscription service that gives you access to more templates, images and designs. The premium elements should be clearly marked, but some collage makers offer more free content than others. Our current choice for the best free photo collage maker is Fotojet. While it might look similar to Fotor and Canva, it's much more flexible and has a user-friendly interface that's easy to navigate for first-time users. It also comes with great editing tools and stylish templates. Any advanced features might cost you a little extra or a membership, but the basic tools are completely free and more than enough for most people. Round up of today's best deals (opens in new tab)
